

UX Design Rationale

Music Lyric Page Design

Diivox

The Problem

An innovative music application was requested in the project. A user-friendly application has been designed and the lyrics of the song can be accessed easily. An application was designed for young people and Apple users.

Target audience

Young music enthusiasts aged 15-30 who seek easy access to accurate lyrics for sing-alongs, social media sharing, and enhancing their overall music experience. These users appreciate visually appealing, user-friendly designs and seamless integration with their favourite music streaming services.

Recommended design

This is the new recommended design based on my explorations.

| MUSIC PLAYER

My process

First, I inserted an image as the background to attract users. This ensured the focus remained on my design. I added some color details to create a different excitement while maintaining a simple design language to avoid confusion. In this way, I designed an app that serves many purposes with a simple interface. I hope it will be used on good days.
