SUMMARY

MCA graduate and Oracle DBA professional with a strong foundation in Oracle Database Administration and SQL. Experienced in database monitoring, troubleshooting, user management, and supporting database operations. Skilled in Python, PHP, HTML, CSS, JavaScript, Windows/Linux, basic networking, IAM Management, Ticket Management, and SLA compliance. Strong problem-solving, communication, and adaptability skills with a focus on maintaining reliable and efficient database and IT operations.

EXPERIENCE

Oracle Database Administrator

Dec '25 — Present

CMS Info Systems Limited

Mangaluru, India

Working as an Oracle DBA at CMS Info Systems, with a strong understanding of SQL and core Oracle Database Administration concepts. Familiar with database monitoring, user and role management, privileges, database security, tablespaces, datafiles, control files, redo logs, database instance management, and backup and recovery concepts. Skilled in writing and executing SQL queries, database troubleshooting, and understanding database performance and availability. Continuously developing practical expertise in Oracle DBA tools, commands, database administration procedures, and troubleshooting techniques.

AI-Powered Web Developer Intern

Nov '24 — Feb '25

Kakunje Software Private Limited

Mangaluru, India

Worked on developing AI-powered web applications by integrating computer vision and machine learning models with full-stack technologies. Contributed to creating scalable solutions, optimizing performance, and ensuring secure role-based access for different users.

- Developed and integrated AI models including YOLOv8 for vehicle detection and EasyOCR for license plate recognition, embedding them into a web application with frontend (HTML, CSS, JavaScript, Bootstrap) and backend (PHP, Python, MySQL).
- Implemented end-to-end AI workflows using OpenCV and Flask, while designing dashboards for Admin, User, and Supervisor to streamline monitoring and management. Improved system efficiency through debugging and optimization, reducing detection latency by nearly 20 percent.
- Documented system architecture, workflows, and deployment process, ensuring maintainability and scalability. Successfully deployed an AI-enabled parking management solution that automated detection and improved operational efficiency.
- Conducted model evaluation and fine-tuning to achieve higher accuracy in vehicle detection and license plate recognition, ensuring reliable performance in diverse real-world conditions.

Research Assistant

AI + AR for Wound Healing

Worked on a research project exploring the integration of computer vision and augmented reality for healthcare applications. Focused on wound segmentation, infection risk prediction, and real-time visualization to support patient monitoring and medical decision-making.

- Designed and implemented a real-time wound segmentation system using U-Net and TensorFlow to accurately detect wound boundaries and track healing progress.
- Developed an infection classification model with AR overlays, providing intuitive visual feedback on wound condition through a Flask backend and camera-based web frontend.
- Produced a working prototype and research paper titled AI and AR for Real-Time Wound Healing Visualization and Infection Risk Prediction, highlighting applications in both healthcare monitoring and e-commerce virtual try-on systems.
- Optimized model performance and AR visualization for real-time responsiveness, ensuring accurate wound detection and minimal latency on web-based platforms.
- Evaluated the model using performance metrics including Dice coefficient, IoU, Precision, Recall, F1-score, Sensitivity, and Specificity to assess segmentation accuracy and reliability.

EDUCATION

MCA in Computer Applications, Mangalore Institute of Technology & Engineering

'24 — '25
Moodbidri, India

- CGPA : 7.65

BCA in Computer Applications, Sri Mahaveera College

'20 — '23
Moodbidri, India

- CGPA : 8.51

CERTIFICATIONS

User-centric Computing For Human Computer Interaction, IIT Guwahati

- Completed an 8-week NPTEL course on User-Centric Computing for Human-Computer Interaction (Jan–Mar 2025) with an Elite certification and a consolidated score of 85%.
- Gained practical knowledge in HCI principles, usability design, and user-centered computing approaches to improve interaction design.

PROJECTS

AI-Based Smart Parking System

- The AI-Based Smart Parking System is a web-based application that integrates Artificial Intelligence to automate vehicle entry, parking slot allocation, and real-time monitoring. Using YOLOv8 for vehicle detection and EasyOCR for license plate recognition, the system ensures accurate identification, secure access, and efficient slot management. Built with HTML, CSS, JavaScript, and Bootstrap for the frontend, PHP and MySQL for backend operations, and Python with OpenCV and Flask for AI integration, it provides role-based dashboards for Admins, Users, and Supervisors, improving parking efficiency, security, and user experience in environments like malls, offices, and hospitals.

Key Points:

- 1.Developed a web-based AI-powered parking solution using YOLOv8 for real-time vehicle detection and EasyOCR for license plate recognition, enabling automated entry and secure access.
- 2.Implemented intelligent slot allocation and real-time occupancy monitoring with live camera feeds, improving parking efficiency and user convenience.
- 3.Built role-based dashboards for Admin, User, and Supervisor with booking, analytics, and management features.

SmartScheduler

- SmartScheduler is a web-based subject allocation platform designed to automate and streamline the process of assigning subjects to faculty members in educational institutions. The system intelligently distributes workloads based on faculty expertise, subject availability, and timetable constraints. Built using HTML, CSS, JavaScript for the frontend and PHP with MySQL for backend management, SmartScheduler provides role-based access for administrators and faculty, ensuring secure data handling, efficiency, and transparency in academic scheduling.

Key Points:

- 1.Automated subject–faculty allocation based on expertise, availability, and timetable rules, reducing manual errors.
- 2.Designed role-based dashboards for administrators and faculty to manage workloads, view allocations, and track schedules.
- 3.Built a full-stack solution with HTML, CSS, JavaScript, PHP, and MySQL to improve efficiency, transparency, and time savings in academic scheduling.

RESEARCH

AI-Powered Augmented Reality (AR) Approach for Real-Time Wound Healing Visualization and Infection Risk Prediction

Presented at the 2025 International Conference on Intelligent Systems and Pioneering Innovations in Robotics and Electric Mobility (2025 INSPIRE)

- Proposed an AI-powered AR system using U-Net deep learning for real-time wound segmentation, healing visualization, and infection risk prediction.
- Developed an AR-based visualization approach to highlight wound regions and monitor healing progress.
- Evaluated the model using Dice coefficient, IoU, Precision, Recall, and F1-score to measure segmentation performance.
- Demonstrated the potential of AI and AR for real-time wound monitoring and remote healthcare applications.

ACHIEVEMENTS

Participated in SAP Hackfest'24

ArboSafe is an IoT-based safety device designed to protect people who climb coconut and other tall trees. The system detects potential hazards such as aggressive bees or poisonous snakes and provides real-time alerts to the user. By identifying risks before accidents occur, it ensures safer climbing practices and reduces injuries. This innovative idea was presented at SAP HackFest'24, showcasing its impact on agriculture, plantation safety, and rural livelihoods.

Participated in SmartIndia Hackfest'24

Where I proposed a web-based parcel tracking system with real-time monitoring. The solution introduced dynamic, sender-approved parcel transfers to reduce delivery time and optimize routes. This innovation enhanced efficiency, improved resource utilization, and boosted customer satisfaction.

SKILLS

Technical Skills MS Office 365, HTML, Python, CSS, Javascript, Figma, Flask, Oracle dba, SQL, PHP, OpenCV, Machine Learning

Soft Skills Multitasking, Teamwork, Time Management, Self-learning, Adaptability
